Annotation: This article reflects the role and relevance of modern technologies in education today, as well as the role of modern pedagogical tools in the promotion of foreign language learning.

Keywords: Digital technologies, distance learning, multimedia, education, technological approach.

In an era of keeping pace with the times, it is difficult to imagine our daily lives without modern technology. Today, almost all areas of human activity are closely connected with the Internet, computers, communications and a number of modern information technologies. A number of measures are being taken in our country to bring the study of foreign languages to a qualitatively new level with the help of modern information technologies.

Radical reform of the education system in the Republic of Uzbekistan has been in the center of attention since the first days of independence as one of the most important tasks. The annual expenditures on the development and reform of the education sector in our country make up 10-12% of GDP and the share of this sector in the state budget is more than 35%, which is rare in other countries of the world. Recognition by the United Nations, UNICEF and other influential international organizations is a clear proof of our opinion. [1]

As the first President IA Karimov said, "We must not forget that the foundation of our future will be laid in educational institutions. In other words, the future of our nation depends on the education and upbringing of our children today. To do this, every parent, teacher and coach must first see the person in the image of each child. Based on this simple requirement, we must accept that the main goal and task of education should be to bring up our children as independent and broad-minded, consciously mature people. It requires a balanced approach to education and upbringing. [2]

The Agency for the Promotion of Foreign Language Learning under the Cabinet of Ministers has set a number of tasks for the promotion of foreign language learning among the population and their perfect mastery:

- Organize the creation of videos, games, entertainment, films and other educational content to master foreign languages, to develop basic language skills;

- Development of methods of professional translation from the state language into foreign languages and from foreign languages into the state language, as well as assistance in improving the skills of specialists in this field;

- creation of necessary conditions for popularization of foreign languages among the population and their perfect mastering, coordination of introduction of internationally recognized programs and textbooks of foreign language teaching at all stages of education and modern teaching skills of teachers. development task. [3]

The use of modern technologies in the process of learning a foreign language significantly increases the intensity of the learning process. Interactive learning using computer programs helps to implement a full range of methodological, pedagogical, didactic, psychological principles, further increases the interest and demand of learners for language learning. This learning method allows you to take into account the work speed of each student. Given the results of psychological research, it should be noted that the use of computers in distance learning is an advantage. Computer-assisted learning and learning have great motivational potential. That is why today the Internet is the only resource system. The computer guarantees privacy. If the results are not recorded for the teachers, only the student knows what mistakes he or she made and the classmates and the teacher are not afraid to know his or her results. The student's self-confidence does not decrease, and the distance learning creates a favorable psychological environment for him. Because the pace of work is determined by the students themselves, computer-assisted learning is as consistent as possible with individual learning principles. E-ISSN NO:2349-0721

Innovative trends in education are the integration of educational institutions at the regional and international levels, the development of international cooperation in the field of education, and based on the principles on which it is based, the development of governance, corporate governance and international standards, material and technical base modernization, increasing funding sources, developing international cooperation, etc. are pressing issues in the education system. [4]

The 21st century has become a time of advanced information technology, which allows students to study remotely in any direction that interests them. Distance education in all directions and forms has become more and more popular due to the development of the Internet. In a certain period of development, the field of distance education, which has many advantages and benefits, is for its users - the use of distance learning programs at their convenience, the optional choice of training period, allows you to conduct independent research on the topic, checking the acquired knowledge through tests in a timely manner.

Multimedia is an invaluable tool for learning foreign languages through distance learning. The distance learning process has the following advantages:

- a) Ability to study the literature and materials provided;
- b) Passion for learning;
- (c) Short-term education;
- g) Ability to apply the acquired knowledge in practice. [5]

Teaching foreign languages requires not only language materials, but also cultural factors. In doing so, the teacher should use specific materials that cover real cultural situations, including movies, news, TV shows, websites, magazines, and newspapers. The teacher should adapt these materials according to the age and language skills of the student. For example, beginner language learners are encouraged to learn the cultural norms of greeting or etiquette through foreign language news and TV shows. The use of audiovisual tools helps to increase students' understanding of the culture and life of the country where they are learning the language, as well as the level of language learning. [6]

In essence, pedagogical technology is a system in which the tasks of all stages and parts of the pedagogical process are programmed in accordance with the distribution of time and provide a scientifically based and expected result. In order to increase the effectiveness of education and achieve full knowledge, to ensure that the individual is the focus of education and young people to acquire independent knowledge, educational institutions are well-prepared and modern in addition to a solid acquisition of knowledge in their field teachers who know pedagogical technologies and interactive methods and can use them in the organization of teaching and educational activities are needed. To do this, it is necessary to equip all science teachers with innovative pedagogical technologies and interactive methods, as well as to improve their skills in applying their knowledge in teaching and learning. In accordance with the state and social order of the system of continuing education, higher education institutions should be creative, socially active, highly spiritual, by increasing the efficiency of the educational process, the implementation of the latest achievements of science. to develop a professional, loyal to the Motherland, educated in the spirit of national and universal values, able to think creatively and independently, to feel their duty and responsibility to the state and society, to instill in their minds and hearts the idea of national independence to perform important tasks such as [5]

Successful solution of these tasks requires the use of modern pedagogical technologies in the educational process. In the educational process, it is important to teach students to think creatively, to change situations, to organize activities on the basis of free competition, and to

be able to use information technology, electronic textbooks and multimedia in practice. This requires students to develop independence, free thinking, analysis of academic performance, and professional development in the future to become their inner need. Modern pedagogical technologies are a set of new forms, methods and tools of the educational process based on a system of scientific, theoretical and methodological. It combines new content, form, methods and tools to ensure the integrity of goals, objectives, activities and pedagogical outcomes, and to design and implement a learning process that guarantees the achievement of learning objectives. The technological approach is expressed, first of all, not in the description, but in the practical demonstration structure, which allows to achieve the designed results.
